Profile

Apprentice in platform development, focused on networks, servers and keeping systems running. At home I run a homelab like a small company network: three network zones, single sign-on, automated updates and off-site backups. When a project needs code, I write it with AI and test and run it myself.

Education

Since 2025, expected to finish in 2029

Informatiker EFZ, platform development

Technische Fachschule Bern, class INF2025. School and practical training at the same place. Focus in practice: networking, including a high-availability pfSense firewall cluster with CARP.

Projects

October 2026, open source

Passkey login for pfSense

Add-on that adds a passkey as a second factor to the pfSense web interface. Version 1.0.1, in use on my own firewall. PHP, JavaScript, WebAuthn.

Autumn 2026

Netzwächter

LTE device that reports power cuts by SMS, with firmware and an Android app. ESP32, LTE, Flutter, Bluetooth.

Since 2025

Homelab

Proxmox server with a pfSense firewall, DMZ, Authentik single sign-on, TrueNAS storage, Ansible updates and weekly encrypted off-site backups. Used daily by my family and friends.

School project, module 306

Self-hosted messenger

Chat server with Matrix Synapse and Element, from planning and test concept to the finished project.

Skills

Networking
pfSense, CARP, VLANs, NAT, DNS

Server
Proxmox VE, Linux, Docker, LXC, TrueNAS, ZFS

Security
Authentik, Cloudflare Zero Trust, CrowdSec, Passkeys

Operations
Ansible, Semaphore, Netbox, Pulse, documentation

Code, with AI
PHP, C++ (Arduino), Flutter, HTML, CSS

Languages
German, English

More on every project: server-lukas.com. As of 13 Nov 2026.
